ABSTRACTED-PUB-NO: JP08130773A

BASIC-ABSTRACT:

The connector has an interface (101) between a data terminal equipment and a mobile telephone machine (3). A current controller regulates the current supplied to the mobile telephone machine. The inner package of the interface and current controller is then executed.

The case has a positioning part in which the mobile telephone machine can be positioned with accuracy. A coupler connects electrically the interface and the current controller with the mobile telephone machine.

ADVANTAGE - Prevents discharge of battery during mobile telephone machine operation in data communication, thus prolonged data communication is enabled; enables control of charging operation by controller thus simplification of control circuit is attained.
